

### **Rotomotive Invited to Present at ANTEC 2013**

Dr Nick Henwood of Rotomotive will be presenting a technical paper at the forthcoming ANTEC conference, to be held in Cincinnati, Ohio in April this year. His paper, which is co-authored by Dr Chris Liauw and Hashim Bhabha of Manchester Metropolitan University (MMU), describes some research done recently into the behaviour of polyethylene blends in rotomoulding.

Rotomotive is sponsoring several PhD and MSc students at MMU, which has an excellent reputation for original research in the field of polymer chemistry and plastics processing.

ANTEC, which is held annually by SPE (the Society of Plastics Engineers), is the premier technical conference for the plastics industry and draws a huge global attendance, with many concurrent sessions. The Rotational Molding Group is a strong sub-section of the overall SPE organisation and attracts speakers from academia and industry who are technical experts in their fields. All submitted papers are thoroughly peer reviewed, meaning that their technical quality and originality is assured. Examples of papers previously given to previous ANTEC events can be found in our [Technical Resources](#) section.

ANTEC 2013 will be held at the Duke Energy Convention Center, Cincinnati, Ohio, USA during the period 22-24 April 2013. If you are interested in attending, full details can be found at [www.4spe.org](http://www.4spe.org)
